

Saksham Malik

PRODUCT MANAGER | AI-FIRST PRODUCT BUILDER | ENTERPRISE LOGISTICS SAAS
sakshammalik0069@gmail.com | +91-7018341067 | LinkedIn | Portfolio

Summary

Product-minded SaaS professional with 4+ years of experience across TMS, OMS, WMS, and LMS, partnering with customers, Product, and Engineering across SEA and GCC enterprise accounts. Experience includes customer discovery, workflow analysis, product requirements, roadmap planning, prioritization, analytics, UAT/SIT, go-live, and adoption. Hands-on Product Management experience across user research, JTBD, prototyping, product metrics, GTM, and AI-native 0-to-1 product development.

Experience

Solution Engineer – FarEye Technologies

2024 – Present

Enterprise Logistics SaaS | TMS / OMS / WMS / LMS | SEA & GCC Clients | Noida, India

- **Reduced feedback-to-release cycle time by ~20%** by converting recurring customer issues into structured product proposals, acceptance criteria, and roadmap inputs for Product and Engineering.
- **Expanded enterprise workflow coverage across 5+ operational enhancements** by translating customer requirements across customs, force majeure, racking, bulky-item classification, and PUDO workflows into product requirements and implementation plans.
- **Improved post-launch order accuracy for Asyad Express** by analysing usage data, identifying order-flow drop-offs, and translating adoption gaps into roadmap improvements.
- **Replaced manual rate calculations with a self-service workflow** by defining requirements, business rules, and acceptance criteria for a rate card and billing dashboard in partnership with Product and Engineering.
- **Automated 95%+ of recurring BPM tasks and reduced support-ticket volume by ~10%** by analysing operational workflows and building SQL-based dashboards for sort accuracy, routing efficiency, SLA performance, and PUDO adoption.
- **Achieved zero misrouting during Postal Flow hub removal and incident-free Citylink launch** by coordinating SIT, UAT, go-live, and hypercare across carrier and customer integrations, including API mapping, rate calculations, edge cases, and exception flows.

Associate Solution Engineer – FarEye Technologies

2022 – 2024

Enterprise Logistics SaaS | Solution Consulting | SEA & GCC

- **Supported enterprise deal conversion across SEA and GCC** by leading discovery sessions and technical demonstrations that translated prospect workflows into solution approaches.
- **Resolved ~90% of production incidents within SLA** by analysing application logs, API behaviour, and workflow failures while coordinating resolution with Product, Engineering, and client teams.
- **Improved platform reliability** by executing a server migration from a third-party hosting provider to FarEye infrastructure and reducing recurring incident exposure.
- **Reduced manual operator intervention during high-volume runs** by developing scheduling automation for recurring operational workflows.

Graduate Engineer Trainee – FarEye Technologies

2021 – 2022

Enterprise Logistics SaaS | Product Configuration | Client Solutions

- **Reduced manual invoicing effort by 60%** by mapping client workflows to platform capabilities and automating invoicing logic, while also reducing reconciliation errors.
- **Delivered 10+ custom client solutions** across requirements analysis, configuration, integrations, and implementation, improving platform fit for customer-specific operational workflows.

Product Projects

Navigator – AI Capability Intent Routing Product

Apr 2026

Product Management Case | Claude Agents / Projects / Prompts

- **Identified a capability-selection problem affecting 88% of researched users** by conducting primary research with 25 Claude Pro and Team users; 40% cited task-fit confusion as the hardest decision and only 12% reported high confidence in their choice.
- **Selected an intent-routing solution with a RICE score of 160 versus 28 and 35** after defining the “Aware & Frustrated / Capable Explorer” segment, establishing the JTBD, and comparing 3 solution concepts.
- **Designed a 5-stage MVP decision journey** covering task intake, intent analysis, fit scoring, ranked recommendations, and risk/trade-off guidance; developed the working prototype using Lovable.
- **Defined Task-Fit Confidence Uplift as the North Star metric** with a target of >60% of users reporting $\geq 4/5$ confidence; established validation, monetization, GTM, and risk criteria.
- **Owned the Product Management case from problem framing through MVP definition**, positioning Navigator as an intent-routing layer that helps users select between Agent, Project, and Prompt based on task context.
- **Prototype:** [knack-route.lovable.app](#) **AI Prompts:** [Notion Prompt Library](#)

FELT – AI-Native Gifting Intelligence MVP

2026

0-to-1 AI Product Build | Product Strategy | Prototype

- **Built a 0-to-1 AI gifting MVP** from problem framing to working prototype, defining recipient profiling, occasion mapping, recommendation flows, product architecture, documentation, and pitch materials.

Skills

Product Management

Product Discovery · Customer Discovery · User Research · JTBD · Problem Framing · PRDs · Product Requirements · Roadmap Planning · Prioritization (RICE) · Product Metrics · Experimentation · Prototyping · GTM · Stakeholder Management · Change Management

Data & Analytics

SQL (MySQL) · Python · Power BI · Superset · Grafana · KPI Design · Funnel Analysis · Dashboarding

AI / GenAI

Claude · Lovable · GenSpark · Prompt Engineering · LLMs · RAG Concepts · AI Product Development

Enterprise SaaS

TMS · OMS · WMS · LMS · Order Management · Warehouse Operations · Last-Mile Operations

Technical

REST APIs · Postman · JSON · Shell Scripting · Git · JavaScript · Java

Delivery

JIRA · Agile · Regression Testing · Incident Management · UAT / SIT · Go-Live Readiness · Gap Analysis

Education

B.Tech, Computer Science & Engineering – Chitkara University, Rajpura

2018 – 2022

CGPA: 8.8 / 10

Certification

Product Manager Fellowship – NextLeap

Apr 2026
